Abstract (en)

[origin: EP0828049A2] A locking device (1) includes at least one handle, with intermediate circuiting of a coupling apparatus via the connecting elements with a lock element which can be driven by an actuator (7), in particular a latch pawl (1.9). When the actuator drive (7) is activated, via the coupling device having a servo device (2), a transfer of force can be executed by the at least one handle on the locking element.
