Abstract (en)

[origin: EP0828055A2] The seal rests against a window pane, protruding from the base part which is fixed to a window casement (1). A support part also protrudes from the base part. The seal consists of cellular or foam material, and the base part is harder and less compressible. The support part has a row of protuberances separated by recesses and spaced apart. The row of protuberances extends in the lengthwise direction of the seal (5).
