Abstract (en)
Lamella cutter, comprising a lower part (1) which bears a lower blade (8) and an upper part (2) which bears an upper blade (18) and is hingeable with respect to the lower part (1) about a fixed hinge pin (3), while a spring (9) is present which is active in the sense of opening the two parts of the cutter. The blades (8,18) are positioned parallel to the hinge pin (3) of the two parts and guide elements (13,13') are arranged such that they receive the lamella between them with its longitudinal direction perpendicular to the direction of the hinge pin (3). Preferably, the upper part (2) is provided with a feed-through opening for the lamella, near the hinge pin (3). The lower part (1) bears a slide guide (4) for a ruler (6). Preferably, an extension section (5) is displaceable in the slide guide (4), in which section the ruler (6) is in turn displaceable. <IMAGE>
