Abstract (en)
[origin: EP0828133A2] The housing forms a forward housing extension via a connection (14) with the barrel. A long rail is formed as support for the telescope on the top of the housing and on the housing extension. The housing parts are made of light metal, and are made from a drawn profile. The first part (10) is the housing and the second part (11) is the housing extension and the greatest part of the adhesive seam (13) between them is cylindrical. The cross-section of the housing or the housing extension over the horizontal central plane has a lateral widened formation on both sides and approximately forms a stage in it.
