Abstract (en)  
[origin: EP0828272A2] The arc-extinguishing chamber of an electrical load isolating switch has a flat chamber 36 that has a hinged knife-blade 30 with a contact 38 at the tip that moves relative to a side extinguishing plate 42. The plate is of extinguishing gas generating material and a small extinguishing channel is formed 34. Plates 48 are set on to both sides. The cross-section of the channel is independent of the current and the gas-pressure remains constant.
