Abstract (en)
[origin: WO9638350A1] Container for a carbonated beverage including an insert (1, 11) arranged to jet gas into the beverage in the container upon opening the container to liberate bubbles of gas from the beverage to give the appearance of a beverage dispensed from draught. The insert (1, 11) includes a means (2, 16) for allowing communication between the inside of the insert (1, 11) and the container. The insert (1, 11) includes a hinge (6, 15) surrounding the communication means (2, 16) so that the means (2, 16) initially abuts a seat (5, 12), but flexes away from the seat (5, 12) upon opening the container. Preferably, the hinge (6, 15) resists the communication means (2, 16) flexing back into abutment with the seat (5, 12) after opening of the container.
