Abstract (en)

[origin: WO9638611A1] A jet nozzle (2) designed for weft thread insertion is allocated to the monolithic shed-holding component (1) for the weaving rotor (5) of a shed course loom. Said component (1) is made from a single piece of metal. According to the invention, the jet nozzle (2) is integrated in the shed-holding component and comprises at least one drilling (21) in said component.
