Abstract (en)
[origin: WO9637866A1] The Distributed Gaming System provides a user with remote location gaming, for example from within a hotel room. Using the room's television and a remote control, the user, such as a hotel guest, is able to play games similar to those available on a Video Lottery Terminal. The games are displayed on a TV through the use of a TV set-top box. The set-top box connects the TV to a network of computer systems through which the Gaming System is distributed and managed. Game access is obtained using a payment swipe device. A special feature of system is the progressive jackpots that are available to game players; these jackpots are at the hotel, jurisdiction, and global levels.
