Abstract (en)

[origin: EP0829208A1] The ski boot has an external sole (11) and an upper (10) with a rigid rear part (12) on which a collar (13) is articulated around the users lower leg. This extend upwards from its side articulation (14). The collar is able to pivot rearwards around its articulation against an energised return (15) interposed between the collar and the upper. The return has an upper semi-circular branch (18) anchored laterally by its ends onto the collar. A lower part (16,17) connected to the upper branch abuts against a lower stop (21) of the upper. The lower part comprises first (16) and intermediate (17) branches.
