Abstract (en)
[origin: EP0829213A2] One rail (20) is fixed to the main furniture body, and the other rail (21) acts as runner rail for the drawer (10). A back (27) and front (29) coupling connect the drawer to the runner rail by means of coupling elements (28,30,31). The rails of each pull-out unit, consisting of guides (11,12), make up a unit ready for assembly, so that the drawer is placed onto the runner unit. The Z-shaped runner rail may have a bottom rail part (35) open at the top and with U shaped cross section. The two parallel U arms (36,37) are joined at the bottom by a horizontal bar (38). The bottom edge (39) of the drawer may have two parallel, longitudinal, vertical outer contact surfaces (40,41) resting against the facing inner surfaces of the two U-arms.
