Abstract (en)

[origin: EP0829279A2] The base or fixture plate has arranged on it a housing which supports a boot holder device releasably holding a long end of a ski boot or its sole. The housing in the longitudinal direction of the ski or the binding is arranged in front of the point or behind the heel of the ski boot. The boot holder device engages around and over a front and a rear boot or sole end in a clamping position on both sides. The hole pattern (8) in plan view is arranged on the bolt holder device (3) in the area of the boot or its sole. Boot holder components (5,6) supporting the boot (2) or its sole in the direction of a boot longitudinal, transversal and/or main axis in plan view are arranged near at least to a fixture hole (8) on the boot holding unit (3).
