Abstract (en)

The cap (1) in accordance with the invention is of the kind that comprises a sort of inverted dome having a skirt (2) joined to the cap body (1) by means of a tear-off strip (3). The novelty of the invention lies in that the skirt (2) has a number of weakened slots (8) originating at the very edge of the skirt (2) and projecting upwards until they disappear into the outer side surface of the skirt, which slots (8) will reveal any manipulation or attempted opening of the cap, for they will break when submitted to a twisting stress. The slots (8) can be joined in pairs by means of upper transverse slots forming sort of frangible battlements. <IMAGE>
