Abstract (en)

[origin: EP0829433A2] The packet (1) is in the form of a box cut out of a piece of material and folded, to form a front and back, two sides, base and top. A tab protrudes above the back and is sealed to a closure piece with lid. The housing (2) is formed of a closure piece with tabs (7,9) with separate packaging spaces (16,17). The tab may form an integral part of the housing part (7) joined to the housing and forming packaging spaces in the shared cavity (8). The tab can form an overlapping fastening by means of a fold line (23) with a tongue (11) folded at the end by a fold line (10) and with side parts (14,15) joined and folded on both sides of a fold line (12,13) and fitting into side insertion openings in the shared cavity (8).
