Abstract (en)

[origin: EP0829450A1] The cleaning method requires feeding at least one cleaning medium through the gas and liquid flow paths within the filling machine under control of at least one electrical control (28,29,30), with the carousel for the filled containers held stationary. The controlled valves (20,23,24) for the filling element (4) within the container filling machine are opened and closed by the electrical control during the cleaning cycle using a stored control programme.
