Abstract (en)
[origin: WO9405757A1] The invention relates to improvements to hard surface cleaners, and in particular to hard surface cleaners containing suspended particles. The invention provides a stable, structured, liquid composition comprising a continuous aqueous phase, a dispersed lamellar phase and 1-80 wt.% on product of a dispersed, suspended particulate phase, wherein the lamellar phase comprises 2-25 wt.% on product of surfactant comprising primary alcohol sulphate (i) and alkoxylated nonionic surfactant (ii) wherein the ratio of (i)/(ii) falls in the range 20-0.4, said composition further comprising 1-20 % dissolved electrolyte on product.
