Abstract (en)

[origin: EP0829592A1] The flagstone is laid onto prepared supports comprising cement blobs topped with shaped caps to support the corners of the flagstones. The cap has a sloping shape to drain away water and with moulded tags (126) to locate under the corners of the flagstone. The support is positioned on the sloping base which is prepared with a waterproofing layer. A shaped base (500) compensates for the slope and carry the cement support. The flagstone is laid onto the support and tamped down to set the level. The space under the flag forms a drainage area.
