Abstract (en)

[origin: EP0829612A2] The mono-drive is operable by means of a motor with a corresponding control. It is provided with a drive block (3) comprising a gear (31) with inhibiting effect against inherent movement by force of gravity, particularly against an undesirable run-back of the blind and a motor (32). The drive block (32) is arranged in the upper strip (22) or head rail. The controllable energy supply device for the motor incorporates at least electrical connection conduits (5) and a releasable mobile operating device with a control circuit together with a corresponding energy source.
