Abstract (en)
The tool (5) can contain a mounting accommodating the component (1), typically a recess in which a mating portion of the component is inserted. This can incorporate an undercut (6) and the two can be glued together, it being necessary to destroy the component in order to remove it. It can be fixed in position by hand, and can be colour-coded. Several components can be secured to the tool at different positions, to indicate different characteristics. Each component can be in several parts inserted separately and positively locking together. The finished component can be flush with the surface of the tool.

Abstract (de)
Die vorliegende Erfindung betrifft ein Werkzeugsystem mit zumindest einem Werkzeug (5) und zumindest einem Kennzeichnungselement (1). Das Werkzeugsystem zeichnet sich dadurch aus, daß das Kennzeichnungselement (1) getrennt gefertigt und nachträglich mit dem Werkzeug (5) unverlierbar verbindbar ist. <IMAGE>
