Abstract (en)

[origin: WO9641919A1] The invention relates to a check rail device with a check rail (6) secured to a grooved rail (1) sunk into the ground in the region of points or crossings opposite the frog by means of releasably securing devices (7). In order in such a check rail device to keep the securing devices easily accessible, protect them against the penetration of concrete or asphalt and against the effects of weather or the environment and to be able easily and simply to adjust and exchange worn check rails, according to the invention a check rail casing (13) sunk into the ground runs along the check rail (6), in which the securing devices (7) are fitted to be accessible from above. Here the check rail (13) is advantageously secured to the grooved rail (1) and the check rail (6) is supported on the check rail casing (13).
