Abstract (en)

[origin: EP0830922A2] The machine has a clamp table (1) with at least one support moving above it in each of the longitudinal (X) and transverse (Y) directions, to support machining units or processing tools and a saw with circular saw blade, which is arranged to cut at least in the longitudinal direction. A carrier (11) is positioned in front of the table and on the same level. The carrier is as long as, or shorter than, the table, and wider than it. The carrier has roller bodies or slide units (13) on its upper face, to move a section (16) of a large panel (14) to be cut from the carrier onto the table along a cutting line (19), and then to return the remaining part of the panel (17) to the carrier. The table has cross struts (2) with suction clamps (3). These are positioned on either side of the cutting line, under the panel section to be cut and under the remaining panel section.
