Abstract (en)  
[origin: EP0831031A2] The tube has a top with a cylindrical lower part (1). This has an outlet hole (2) and recesses (4) on its periphery. The recesses extend over a quarter of its circumference at an angle of 85 degrees -60 degrees , preferably 80 degrees -70 degrees , to the lower part's axis. A cap has projections around its periphery which fit into the recesses when put onto the lower part. Preferably the recesses are branch channels with an open end (4a) accessible in the direction of the end face and whose closed end (4b) is further from the end face.
