Abstract (en)
[origin: EP0831183A2] The structural element, comprises an insulation body (2) with integrated reinforcement elements such as cross-bars (61, 62) engaged by installation modules (8). The insulation body is divided along a separating plane (23) which crosses the recesses for the installation modules. The installation modules can be inserted and fixed across the extension direction of the cross-bars into the recesses of the at least one insulation body half (22). The cross-bars are profiled such as ribbed in the area enclosed by the module. The modules can engage round the associated reinforcement element in its entire path through the insulation body.
