Abstract (en)

[origin: WO9627716A1] The panel is constructed of railings, infill members and a connecting member (16). The connecting member has an intermediate portion (17), two side walls (19, 20) and forward facing webs (25, 30). The webs (25, 30) terminate in channels (27, 33) and end flanges (26, 32). The connectors are designed to connect with a device of opposite hand on an adjacent panel by lateral movement of the panels towards each other.
