Abstract (en)

[origin: WO9635030A1] A one-piece gutter bracket comprises a substantially C-shaped holding member (1) intended for a gutter, and a substantially L-shaped element (2), whose one leg (5) is adapted to be attached to a surface of attachment and whose other leg (7) is adapted to constitute an underlying support for the holding member (1). The gutter bracket has means for stepwise angular adjustment of the holding member (1) in relation to the L-shaped element (2), and a transverse indication of bending (11) in the transition portion between the holding member (1) and the L-shaped element (2). When mounting the gutter bracket, the holding member (1) is held away from the L-shaped element (2) via the indication (11), whereupon the leg of attachment (5) of the L-shaped element (2) is fastened on the surface of attachment and the holding member (1) is folded back and caused to rest against the supporting leg (7) of the L-shaped element (2). The gutter bracket is made from a blank of thin metal sheet which is cut, punched and bent.
