Abstract (en)  
[origin: FR2747445A1] The invention deals with a shock absorber. According to the invention, it comprises at least one assembly of tubular elements (2) positioned end to end and two adjacent elements having differing sections, the one with the largest cross section being capable of breaking along its line of contact with the outside lateral wall (12) of the other element when an axial compression of predetermined magnitude is applied to the said elements to make them fit one inside the other in telescopic fashion.
