Abstract (en)

[origin: EP0832586A2] The appliance has one end of a double sided adhesive film protruding beyond the plate (1) to act as a grip. The adhesive film is re-detachable by pulling in the direction of the adhesion plane. The front side of the plate has the gripper (5) by which the plate can be held. The forward folding gripper is in the form of a plastic injection moulded piece integrated in the plate. The gripper is positioned on the end of the plate opposite the gripper (8) for the strip (7). The adhesive film is elastically or plastically extensible with or without intermediate support. The reverse side of the strip has a separating, such as siliconised paper or film.
