Abstract (en)
[origin: EP0832719A2] The wet jet plant has a controllable part for preparing dry granulate suspended in a driving gas. It has another controllable part to produce a mixture of the gas with suspended granulate and a liquid for mixing it with. The mixing process takes place in the spray tool. Both parts (16,20) of the plant are controlled centrally by the tool (17). This control is carried out by the operator using individual signal producers for control systems in each part of the plant. The plant may also include a compressor (1) and a granulate heater (4).
