Abstract (en)

An apparatus for processing documents, such as for instance letters, brochures, magazines and the like, wherein for forming sorted stacks from documents, the apparatus comprises a number of document feeders, a conveying track and a control, wherein the document feeders are positioned relative to the conveying track so that documents fed by the document feeders end up directly or indirectly on the conveying track, wherein the conveying track comprises conveying means for advancing the documents over the conveying track, wherein the conveying means and the control are designed to enable conveyance of the documents over the conveying track in a first direction and in a second, opposite direction, wherein the conveying track in a first direction connects to, or continues in a first document-stack processing line and in the second direction connects to, or continues in a second document-stack processing line.
