Abstract (en)

[origin: EP0833017A2] The device has a fastening element which is associated with the latter, and which reaches over its entire width or length. The fastening element is connected to the roof element, and can accommodate at least one connecting element (112). The connecting element projects on at least one side over the width or length of the roof element, and engages in a loop (111) on a second fastening element (108) which is associated with the roof structure. The device may also have only one continuous connecting element over the width or breadth of the moving roof element.
