Abstract (en)

[origin: EP0833028A1] The stop piece has an elongated hole (11) into which fits a bolt (9) on the free end of the arm. The bolt can be connected to and disconnected from, the slide guide stop piece (10) at a point removed from the contact end (13) of the arm. On or near the end of the stop piece facing away from the end of the elongated hole is a wider part (14) for the head of the bolt. A forked body (21) open towards the contact end is supported towards its closed position by an elastic pre-tensioning piece (26). The slot (23) in the forked body has a width matching the elongated hole in the stop piece.
