Abstract (en)
[origin: EP0833122A1] The seeker system has a Charge Coupled Device (D1) array forming a matrix detector of reflected light. Laser light is directed towards a target and reflected back towards the seeker. The matrix detector is attached to an identification system (SI1) to detect target signals. The seeker is mounted on the front of a moving body, and the field of view covers the detection zone. Light rays are focussed (6) onto the matrix detector.
