Abstract (en)
[origin: EP0833409A1] The electrical terminal (1) has a contacting region (2) for contacting a complementary contact pin and a connecting region (3) for connecting to an electrical conductor. The contacting region consists of an inner contacting spring (6) and an outer spring (7). The contacting spring, which transitions into the connecting region, has at least two opposing contact spring arms (8-13) supported by the outer spring (7). At least one strut (29) cut out of the side of the outer spring opposite the contact spring arms lies transversely wrt. the plugging direction and is bent inwards so that it presses on the contact spring arms (9,12) from the outside.
