Abstract (en)

[origin: DE19522694A1] A composition that contains at least one tar derivative, a cosmetic preparation that contains this composition, its use and pharmaceutical preparations that contain this composition are disclosed. Animal testing has shown conventional tar-containing preparations to be oncogenic. The disclosed composition allows cosmetic and pharmaceutical preparations to be produced as finely dispersed systems that are more effective and have less side effects than conventional preparations while containing 20 to 200 times less tar.
