Abstract (en)

[origin: WO9700125A1] A flow cell for the passive mixing of at least two flowable substances has an inlet opening (31, 32) for each substance, a common outlet opening (33) and a planar flow bed (21) for mixing the substances. There is provided for each substance a distributor that is arranged between the inlet opening (31, 32) for the substance in question and the flow bed (21) and that divides the substance into a plurality of physically separate thin streams. The distributors supply the thin streams to the flow bed (21) in such a manner that, in the flow bed, adjacent thin streams in contact with one another contain different substances.
