Abstract (en)
[origin: WO9738834A1] The process according to the present invention provides the use of exhausted olive husks, obtained from the crushing of olives, for playing the role of filling, heat-resistant material, in mixture with the polypropylene, that turns into plastic at a temperature about 230 DEG C, and that has an amalgamating function, so as to determine a complete immersion into the polypropylene of each single particle of olive husks, of different granulometry, by means of the realization of a high temperature mixture, for the realization of listel panels, plates charged with exhausted olive husks powder, multi-layer panels and similar.
