Abstract (en)
[origin: WO9700210A1] A closure cap for closing containers has a closure floor (2), a jacket (3) and a tear-off ring (7). The latter is attached to the jacket (3) at connection points (8). To open the closure cap, force is exerted on the tear-off ring (7), thereby destroying two vertical tear lines (9) situated next to the connection points (8). This allows a region of the jacket (3) to bend outwards and makes opening the closure cap easier.
