Abstract (en)

[origin: WO9700342A1] A transport roller (10) is provided and a press roller (12) is forced against said transport roller to grip a thread (26). In order to simplify adjustment of the transport speed while keeping the speed of the transport roller constant, a friction surface (32) is provided on the outside of a casing (78) and can be expanded radially by an adjustment device (66, 72).
