Abstract (en)  
The present invention relates to an anatomical thimble configured like a sheath made of latex, plastic or other material, used as a means for covering one finger in order to clean the mouth, and susceptible of being used for other hygienic applications such as the cleaning of the ears and the like. It is comprised of said envolving sheath (1) closed at one of its extremities and open at the other extremity wherein is provided a ring (3) limiting and surrounding the sheath when fitting the latter to the finger, the sheath having along its body a series of projecting contact and friction means which consist of flexible protuberances (2) or a series of filaments of bristles (10). <IMAGE>
