Abstract (en)

[origin: EP0834335A1] The boot retainer comprises a front part (10) located on a plate (7). The plate is pivoted on the internal zone of the snowshoe about a transverse axis (9). There are positioning and adjustment holes (14) for modifying the longitudinal position of the boot, particularly its front end (4a), and-or its pivoting axis relative to the internal zone. There is a rear retainer (11) fixed to the pivoting plate and a rear adjustment holes (15) enabling longitudinal modification of the position of the rear retainer relative to the pivoting plate.
