Abstract (en)
[origin: EP0834630A2] The belt component (13) runs parallel to the catch locating device. Adjacent to a cuff (2) is a force accumulator acting on a bolt operation slider (22). The force accumulator is formed by the catch spring (8). The catch head (5') in relation to the catch tail (5''), on which the tumbler engages, is locatable in the path of a one-sided free passage in the withdrawal direction. The catch head controls the movement of a securing lever (70) out of its securing position for release of the force accumulator into the free position. A bolt operating slider (22) is coupled for movement with a transmission slider (64).
