Abstract (en)

[origin: EP0729124A1] The alarm system has a central station 1 that has a receiver and a transmitter 11. The receiver is coupled by non contact communication paths to a variety of sensors and detectors, e.g. motion detectors 21, contact detectors 20, smoke detectors 22, temperature and water sensors 23. In addition the system has a manual transmitter 5, a remote controller 8 and a code transmitter 8. The system also has a universal receivers 710, 70 for optical and acoustic information. To check the against disturbances the system has a transponder for test signals. Protection against disturbing noise signals is enhanced by the use of two communication signals of different frequencies and the use of a deactivation phase.
