Abstract (en)

[origin: EP0834966A2] A circuit module (1) within a housing, e.g. of a motor, and used for control is to be externally connected. For this purpose a number of contact pins (3) are soldered into holes and project so as to pass through holes (6) in an insulating plate (5) fitted into an aperture in the cover plate. The pins engage with contact bushes (4) in a connecting plug or socket (2.2). An alternative has contact pins formed as bushes that engage solid pins on a connector.
