Abstract (en)

[origin: EP0834967A2] The socket (1) has an electrically insulating socket housing (2). The housing (2) has at least one insertion slot (9) on its side nearest the base of the lamp (109). Electric contacts (7,8) are arranged in the socket housing (2). The contacts (7,8) are associated with the sections of the slits (9). The sections of the slits (9) to which the electric contacts are allocated have locking mechanisms (95,96) mounted in front of them. The locking mechanisms (95,96) act on a respective contact pin (102,109) of the lamp. The housing (2) is preferably formed in two parts. The part associated with the lamp is formed as a heat shield. Alternatively the housing may be formed in one piece.
