Abstract (en)

[origin: EP0835631A2] The method vacuum cleans the surface with a suction device (1) and transporting small elements which have been sucked up, e.g. dust and dust particles, grass cuttings and leaves, to a container (21) for collection. The container consists of a tubular foil (9) mounted on an esp. annular holder (8). A section of the tubular foil is pulled away from the holder and closed at the detached end to form a container which is filled via the holder. After being filled the container is closed at it hitherto open end and separated from the remainder of the tubular foil.
