Abstract (en)

[origin: EP0835702A1] An apparatus for shaping bars for reinforcing concrete comprises a bar receiving channel (8) having two side walls (7) which are vertically movable and a horizontal plate (17) which is movable vertically between said side walls (7) for pressing the bars (4) downwardly against a bottom wall (6) of the channel (8). When the vertically movable walls (7, 17) are raised, a pushing plate (24) is moved transversally to the channel (8) for feeding the bars (4) towards a discharging position (33). <IMAGE>
