Abstract (en)
[origin: EP0836045A2] The light heads (3) have at least one elongated light source (4), side reflectors (5), a light-permeable base (6) and an upper side prism glass covering (7). The light heads at their one long side end are connected pivotably around a vertical rotary axis (8) to the cross rail (2). The light heads (3) have a removable, translucent plastics body (9), formed as a push part. The prism glass covering encompasses both the light-permeable base on the long sides and the face side turned away from the rotary axis. The plastics body is made of a satinised polymethacrylate, and incorporates an exchangeable inlay (11) made of a coloured material strip.
