Abstract (en)
[origin: EP0836046A1] The light has a secondary reflector on the underside of the roof reflector and which consists of a number of reflector elements (41) arranged in raster formation, each with a mirrored, double convex curvature surface with a group of first and second, mutually perpendicular curved contours (45,46). The first contour, when viewed in a transverse plane of the reflector element, consists of two mutually symmetrical contour halves with curvature decreasing from in to out. The second contour, which lies in a longitudinal pane, consists essentially of a circular section curve with its apex in a transverse plane at a defined distance from the adjacent edge of the reflector element.
