Abstract (en)
[origin: WO9636254A1] A shelving support system for homes, stores and offices. The system uses shelf hangers (16) and wall brackets (12), employing a push-fit interlocking connector (14). The shelf hanger (16) is made of rigid wire member, bent into a V-shape and connected at its ends to a right angled upright member (12) by the connector (14) locked into a square opening (18) in the upright (12). A lower leg (26) of the hanger (16) is suspended by an upper leg (28), with its end portion flush against the upright wall (12), so that it does not rotate, to provide a stable support for a shelf end. The connectors (14) are easily locked into the openings (18) of the upright member (12), and may be quickly removed and re-positioned, enabling quick and easy construction of an entire shelving system, or easy alteration of its layout.
