Abstract (en)

[origin: EP0836826A2] The attachment piece (1) has a suction channel (20) arranged in the suction channel housing (15), issuing in a slot-shaped suction mouth (21). The housing covers the fluid application device (3) in an arc formation. The fluid application device is secured in the arc interior, to at least one slide (25), which penetrates the housing (15). On the upper side of the housing, the slide is formed as a handle (26) for position adjustment. The suction mouth is divided crossways to its longitudinal extent into individual suction sections, which in the suction direction issue into a common suction chamber (53).
