Abstract (en)

[origin: EP0836886A1] The switch flap (1) is fitted into the housing underside (2a) by corresponding connecting points (3-6). A spring hinge point is located directly above the connecting points and extends over its whole length. The flap on its side facing away from the shredded material outlet gap has a rib (S) acting as a cam for operation of the limit switch (E) effecting stopping of the drive. The connecting points are formed as force-locked snap connections (3) and form-locked guide pins (4) on the lower edge.
